

MPH and PSI options when applying XtendiMax, FeXapan, and Engenia

This document includes charts for 03, 04, 05, and 06 orifice sizes on 15-inch spacings.

All results are suggestions to help improve efficacy and mitigate drift.

Chart 1: Calculations are for a 15-inch nozzle spacing and 03 orifice sizes - Not PWM^a

Prepared by Robert E. Wolf, Jan. 2018

Below are the speed and pressure options/limitations when using the recommended GPA and MPH options with an 03 orifice maintaining a PSI range of 40-65 ¹ – Not using PWM				
GPA ²	MPH ³	Calculated GPM ⁴	Calculated PSI ⁵	Use – Yes or NO ⁶
10	5	.13	7.5	NOT ACCEPTABLE
There are no options for using this orifice size below this MPH and GPA				
10	10	.25	27.8	NO
10	11	.28	34.8	NO
10	12	.30	40.0	YES
10	13	.33	48.4	YES
10	14	.35	54.4	YES
10	15	.38	64.2	YES
11	10	.28	34.8	NO
11	11	.31	42.7	YES
11	12	.33	48.4	YES
11	13	.36	57.6	YES
11	14	.39	67.6	NO
12	9	.27	32.4	NO
12	10	.30	40.0	YES
12	11	.33	48.4	YES
12	12	.36	57.6	YES
12	13	.39	67.6	NO
13	8	.26	30.0	NO
13	9	.30	40.0	YES
13	10	.33	48.4	YES
13	11	.36	57.6	YES
13	12	.39	67.6	NO
14	8	.28	34.8	NO
14	9	.32	45.5	YES
14	10	.35	54.4	YES
14	11	.39	67.6	NO
15	5	.19	16.0	NOT ACCEPTABLE
15	7	.27	32.4	NO
15	8	.30	40.0	YES
15	9	.34	51.4	YES
15	10	.38	64.2	NO
15	11	.42	78.4	NO
16	7	.28	34.8	NO
16	8	.32	45.5	YES
16	9	.36	57.6	YES
16	10	.40	71.1	NO
17	6	.26	30.0	NO
17	7	.30	40.0	YES
17	8	.34	51.4	YES
17	9	.39	67.6	NO
18	6	.27	32.4	NO
18	7	.32	45.5	YES
18	8	.36	57.6	YES
18	9	.41	74.4	NO
19	6	.29	37.4	NO
19	7	.34	51.4	YES
19	8	.38	64.2	NO
19	9	.43	82.2	NO
20	5	.25	27.8	NO
20	6	.30	40.0	YES
20	7	.35	54.4	YES
20	8	.40	71.1	NO
There are no options for using this orifice size above this MPH and GPA				

^aAll footnotes appear at the end of these charts. Please read to better understand how the charts were prepared and the intention of these calculations.

Chart 2: Calculations are for a 15-inch nozzle spacing and 04 orifice sizes – Not PWM^a

Prepared by Robert E. Wolf, Jan. 2018

Below are the speed and pressure options/limitations when using the recommended GPA and MPH options with an 04 orifice maintaining a PSI range of 40-65 ¹ – Not using PWM				
GPA ²	MPH ³	Calculated GPM ⁴	Calculated PSI ⁵	Use – Yes or NO ⁶
10	5	.13	4.2	NOT ACCEPTABLE
There are no options for using this orifice size below this MPH and GPA				
10	14	.35	30.1	NO
10	15	.38	36.1	NO
11	13	.36	32.4	NO
11	14	.39	38.0	NO
11	15	.42	44.1	YES
12	12	.36	32.4	NO
12	13	.39	38.0	NO
12	14	.42	44.1	YES
12	15	.45	50.1	YES
13	11	.36	32.4	NO
13	12	.39	38.0	NO
13	13	.43	46.2	YES
13	14	.46	52.9	YES
13	15	.49	60.0	YES
14	10	.35	30.6	NO
14	11	.39	38.0	NO
14	12	.42	44.1	YES
14	13	.46	52.9	YES
14	14	.49	60.2	YES
14	15	.53	70.2	NO
15	5	.19	16.0	NOT ACCEPTABLE
15	9	.34	28.9	NO
15	10	.38	36.1	NO
15	11	.42	44.1	YES
15	12	.45	50.6	YES
15	13	.49	60.0	YES
15	14	.53	70.2	NO
16	9	.36	32.4	NO
16	10	.40	40.0	YES
16	11	.44	48.4	YES
16	12	.48	57.6	YES
17	9	.39	38.0	NO
17	10	.43	46.2	YES
17	11	.47	55.2	YES
18	8	.36	32.4	NO

20	8	.40	40.0	YES
20	9	.45	50.6	YES
20	10	.51	65.0	NO
20	11	.56	78.4	NO

^aAll footnotes appear at the end of these charts. Please read to better understand how the charts were prepared and the intention of these calculations.

Chart 3: Calculations are for a 15-inch nozzle spacing and 05 orifice sizes – Not PWM^a

Prepared by Robert E. Wolf, Jan. 2018

What are the speed and pressure options/limitations when using the recommended GPA and MPH options with an 05 orifice maintaining a PSI range of 40-65 ¹ – Not using PWM				
GPA ²	MPH ³	Calculated GPM ⁴	Calculated PSI ⁵	Use – Yes or NO ⁶
10	5	.13	2.7	NOT ACCEPTABLE
11	15	.42	28.2	NO
12	15	.45	32.4	NO
13	14	.46	33.9	NO
13	15	.49	38.4	NO
14	13	.46	33.9	NO
14	14	.49	38.4	NO
14	15	.53	44.9	YES
15	5	.19	16.0	NOT ACCEPTABLE
15	11	.42	28.2	NO
15	12	.45	32.4	NO
15	13	.49	38.4	NO
15	14	.53	44.9	YES
15	15	.57	52.0	YES
16	11	.44	31.0	NO
16	12	.48	36.9	NO
16	13	.53	44.9	YES
16	14	.57	52.0	YES
16	15	.61	59.4	YES
17	10	.43	29.5	NO
17	11	.47	35.3	NO
17	12	.52	43.3	YES
17	13	.56	50.2	YES
18	10	.45	32.4	NO
18	11	.50	40.0	YES
18	12	.55	48.4	YES
18	13	.59	55.7	YES
19	9	.43	29.6	NO
19	10	.48	36.9	NO
19	11	.53	44.9	YES
19	12	.58	53.8	YES
20	9	.45	32.4	NO
20	10	.51	41.6	YES
20	11	.56	50.2	YES
20	12	.61	59.5	YES
20	13	.66	69.7	NO
There are no options for using this orifice size above this MPH and GPA				

^aAll footnotes appear at the end of these charts. Please read to better understand how the charts were prepared and the intention of these calculations.

Chart 4: Calculations are for a 15-inch nozzle spacing and 06 orifice sizes – Not PWM^a

Prepared by Robert E. Wolf, Jan. 2018

What are the speed and pressure options/limitations when using the recommended GPA and MPH options with an 06 orifice maintaining a PSI range of 40-65 ¹ – Not using PWM				
GPA ²	MPH ³	Calculated GPM ⁴	Calculated PSI ⁵	Use – Yes or NO ⁶
10	5	.13	2.0	NOT ACCEPTABLE
14	15	.53	31.2	NO
15	5	.19	16.0	NOT ACCEPTABLE
15	14	.53	31.2	NO
15	15	.57	36.1	NO
16	13	.53	31.2	NO
16	14	.57	36.1	NO
16	15	.61	41.3	YES
17	12	.52	30.0	NO
17	13	.56	34.8	NO
17	14	.60	40.0	YES
17	15	.64	45.5	YES
18	12	.55	33.6	NO
18	13	.59	38.7	NO
18	14	.64	45.5	YES
18	15	.68	51.4	YES
19	11	.53	31.2	NO
19	12	.58	37.4	NO
19	13	.62	42.7	YES
19	14	.67	49.9	YES
19	15	.72	57.6	YES
20	10	.51	28.9	NO
20	11	.56	34.8	NO
20	12	.61	41.3	YES
20	13	.66	48.4	YES
20	14	.71	56.0	YES
20	15	.76	64.2	NO
There are no options for using this orifice size above this MPH and GPA				

^aAll footnotes appear at the end of these charts. Please read to better understand how the charts were prepared and the intention of these calculations.

Footnotes:

¹The XtendiMax and FeXapan labels specify that applicators must use an approved nozzle found on each of their respective websites (www.extendimaxapplicationrequirements.com and www.fexapanapplicationrequirement.dupont.com - Appendix A & B), and to use the nozzle within a specified pressure range. The Engenia label also advises applicators to refer to the following website (www.engeniatankmix.com - Appendix C) to select an approved nozzle and do not exceed the nozzle manufacturer's specified pressures. Some of the nozzles approved suggest a maximum pressure near 60 PSI while others are limited to a maximum of 40 PSI. **Warning!** Most all nozzles are listed with extremely low pressures as acceptable. However, based on research, and through years of experience working with venturi nozzle types, the author is suggesting a lower pressure cut-off at 40 psi for some of the nozzles listed. That stated, those with a maximum at 40 PSI would be acceptable at 30 PSI on the lower end. In any setting, 20 PSI or lower would not be advisable. Using a lower pressure with some venturi nozzles may result in a poor pattern, with larger than needed droplet sizes, with the possibility of reduced coverage and weed control. **For the purpose of the charts provided in this document, a 40 PSI lower pressure cut-off is advised (except as noted above)...strictly to protect against a poor pattern and coverage with reduced weed control.** Thus, the suggested acceptable MPH and GPA combinations shown in these charts are based on a pressure range of **40 – 65 PSI**. **If you are using a nozzle with a 30 PSI minimum, you will need to calculate (see footnote 4 and 5 below) your own parameters.** **None of these charts reflect the nozzles approved for PWM. All calculations are based on a conventional spray system with a rate controller.**

²The Engenia label specifies a minimum of 10 GPA. XtendiMax and FeXapan now specify a minimum of 15 GPA. For more options at 15 GPA, a larger nozzle size is recommended. The charts included are based on calculations to determine the speed and pressure combinations with a variety of GPA's that will deliver an acceptable pattern while mitigating drift.

³The label specifies a maximum driving speed of 15 MPH. Speeds below 10 MPH would be acceptable provided the minimum pressures are maintained. An 03-sized orifice will allow for slower speeds. Please note that the Engenia label suggests dropping the speed to 5 MPH along the edge of the treatment area. This would not be acceptable, as the pressure would be so low that the spray pattern would likely collapse (boom could shut off). **Remember – the pressure gauge should be used as your speedometer!**

⁴The following formula was used to determine GPM: $GPM = GPA * MPH * 20 / 5940$

⁵The usable pressure is determined with the following formula: $GPM_1 / GPM_2 = \sqrt{PSI_1} / \sqrt{PSI_2}$. This calculation is based on the relationship of liquid flow through a given orifice size at a specific PSI. The University of Illinois app – **Sprayer Calibration Calculator**, can also be used to determine the GPM and then the PSI for the various GPA and MPH combinations.

⁶As shown by the calculations in this table, there are a limited number of options when adhering to the GPA, MPH, and PSI parameters specified for applying these products. **The YES-options are identified in green** in each of the tables. **The NO-options are in red.** If a MPH and GPA combination is not shown, that is an indication the calculation did not meet the pressure range guidelines set forth in this document.
